

Over the last half century we have worked hard to build up an enviable reputation for quality products, reliability and innovation.

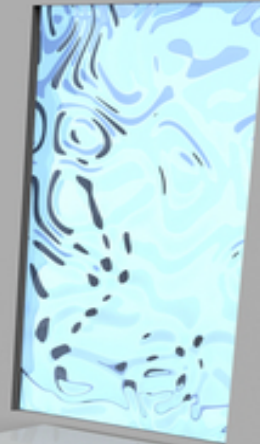

From the designing and manufacturing of standard valves, customer special solenoids or complete bespoke OEM solutions we constantly give the best of what we have to offer.

With our head office located in the UK, an additional office in North America and a worldwide distribution network, we are well placed to assist in developing projects and offer technical assistance in product development.

Alcon valves can be found in applications where the flow of liquid or gas must be reliably and automatically controlled. Our product line covers a full range of valves for general and special-purpose including:

- Air
- Hot water
- Steam
- Cryogenics
- Water
- Gases
- Fuel
- Aggressive media

Looking to the future there are ambitious plans. We believe that continuing to invent, innovate and invest is the best way forward and we are as confident that our next half century will be just as successful as our last.
